Child Class

# About Class

팔 vs 슈크림  
= Public

반죽의 비율  
= Private

Encapsulation

# Stateful vs Stateless

| Aspect            | StatelessWidget                 | StatefulWidget                          |
|-------------------|---------------------------------|-----------------------------------------|
| Mutability        | Immutable (no internal changes) | Mutable (can change over time)          |
| State persistence | No                              | Yes (via State object)                  |
| Build trigger     | External (parent rebuilds)      | Internal (setState) or external changes |
| Complexity        | Simpler, more performant        | More complex but powerful               |
| Typical use cases | Static UI, icons, titles        | Counters, forms, animations, async data |
